

Index

- Abyssomicin C, synthesis, 291
Acetoxybenziodazole, X-ray structure, 62
Acetoxybenziodoxaboroles, 65
1-Acetoxy-1,2-benziodoxole-3(1*H*)-one, preparation, 54
 α -Acetoxylation of ketones
 Bu₄NI-catalyzed, 369
 ESI-MS/MS study, 339
 iodobenzene-catalyzed, 338
 mechanism, 338, 339
Acetylation, of alkenes, enantioselective, 178
10-Acetylphenaziodonium salt, 74, 75
2-Acylbenzothiazoles, synthesis, 205
Acylbenzyne, iodonium salts as precursors, 266
2-Acylfurans, polysubstituted, synthesis, 206
Adamantane, tosylation, 231
Aerobic catalytic system, for C–H functionalization,
 iodine-based, 377
Aerobic oxidation of alcohols, catalyzed by PhIO₂, Br₂
 and NaNO₂, 364, 365
Agelastatins A and B, synthesis via alkynyliodonium salt,
 272, 273
(–)-Agelastatin, synthesis, 291
(±)-Aiphanol, synthesis, 292
Alcohols, catalytic oxidation, by iodine(V) species, 359,
 360
Aldehydes, coupling with amines to give amides, 232
Alditols, synthesis by alkoxy radical fragmentation, 241
Aldoximes, oxidation to nitrile oxides, 217
Alduronic acid, lactone, synthesis, 244
Alkenes
 azidation to diazides, 222, 226
 diacetoxylation, 178
 diamination, by (diacetoxyiodo)benzene and
 bis-sulfonimides, 230
 enantioselective diamination, 230
 mechanism of reactions with iodine(III) reagents, 174,
 175
 nucleophilic epoxidation of electron-deficient alkenes,
 179
 oxidative functionalization, 173–181
 preparation of 1,2-diperchlorates or 1,2-ditosylates,
 174
 reaction with activated iodosylbenzene, 174
 reaction with [bis(trifluoroacetoxy)iodo]benzene, 178
 reaction with HTIB, 175
 reactions with μ -oxo-bridged triflate and perchlorate,
 176
 reactions with phenyliodine(III) sulfates, 176–178
Alkenyl(aryl)iodonium salts, preparation
 by the addition of hypervalent iodine reagents to
 alkynes, 85, 86
 from alkynyl(aryl)iodonium salts, 85, 87
Alkenyl(aryl)iodonium triflates, preparation, by
 iodonium transfer, 85, 86
Alkenylations, with alkenyliodonium salts
 of benzotriazole, 268
 of carbon nucleophiles, 269
 of dithiocarbamates and carbonotrithioates, 268
 of fluoride, 268,
 of phosphorothioates and phosphoroselenoates, 268
 of telluroates and selenolates, 268
 of thioamides, 268
 of thiocyanate, 268
 transition metal-catalyzed, 269
Alkenyliodonium salts
 history, 84
 preparation, 84–88
 reactions, 267–270
 structural studies, 88, 89
 X-ray structures, 88, 89
Alkenyliodonium tetrafluoroborates, preparation
 from alkenylboronic acids and
 (diacetoxyiodo)benzene, 85
 from alkenylsilanes and iodosylarenes, 85
Alkenyl(phenyl)iodonium salts, reactivity and
 mechanism of reactions, 267
 application as alkenylating reagents, 268–270
 α -elimination leading to alkylidenecarbenes, 269, 270

- 2-Alkoxyarenols, oxidative dearomatization, 193
- 2-Alkoxyphenyliodonium ylides
preparation and properties, 100
X-ray structure, 106
- Alkoxy radical fragmentation, 240–244
- Alkoxy radicals
 β -fragmentation mechanism, 244
generation from alcohols and iodosylbenzene, 243, 244
generation from alcohols and $\text{PhI}(\text{OAc})_2$ –iodine system, 239, 240
- Alkylarenes, oxidative coupling, 200
- Alkylations, with alkylodonium salts, 275
- Alkylidene carbenes
as intermediates in reactions of alkynyliodonium salts, 270, 271
intermolecular cyclization, 271
intramolecular cyclization, 272
- Alkylodides
oxidation, 248, 249
oxidatively assisted hydrolysis, 249
- Alkyl iodine(III) dichlorides, fluoros, 404
- Alkylodine(III) derivatives, as reactive intermediates, 248–250
- Alkylodonium salts, 96–99
- Alkylperchlorates, synthesis, 249
- Alkylperoxybenziodoxoles
preparation, 54, 55
as reagents for oxidation of sulfides, selenides and phosphines, 219
- Alkylsulfonates, synthesis by oxidatively assisted nucleophilic substitution of iodine, 249
- Alkynes
oxidative functionalization, 176
reaction with HTIB, 175, 176
reaction with
[hydroxy(dialkylphosphoryloxy)iodo]benzenes, 176
- Alkynyl(aryl)iodonium salts
properties, 94
spectra, 94
X-ray structures, 94
- Alkynylations
with alkynylbenziodoxoles, 273, 274
with alkynyl(phenyl)iodonium salts, 270
transition metal-catalyzed, 271
- Alkynylbenziodoxathioles, 68
- Alkynylbenziodoxoles
from benziodoxole triflates and alkynyltrimethylsilanes, 57, 58
preparation, from hydroxybenziodoxole, 57
X-ray structure, 57
- Alkynyl cyclohexanols, ring expansions using $\text{PhI}(\text{OH})\text{OTs}-\text{I}_2$ system, 163, 165
- Alkynyl cyclopentanols, ring expansions using $\text{PhI}(\text{OH})\text{OTs}-\text{I}_2$ system, 163
- Alkynyliodonium salts
as cationic photoinitiators, 429
coupling with organocopper reagents, 270
mechanism of reactions with nucleophiles, 270
preparation, 89–94
properties and structure, 94
reactions, 270–275
X-ray structures, 94, 95
- Alkynyliodonium tosylates
polymer-supported, 388
preparation from HTIB and terminal alkynes, 90, 91
- Alkynyl(phenyl)iodonium tetrafluoroborates, preparation from iodosylbenzene and alkynylsilanes, 93
from organotrifluoroborates and (difluoroiodo)arenes, 93, 94
- Alkynyl(phenyl)iodonium tosylates, preparation from alkyne and HTIB, 176
- Alkynyl(phenyl)iodonium triflates, preparation by iodonium transfer, 91, 92
using $2\text{PhIO}\cdot\text{Tf}_2\text{O}$, 92
- Alkynyl phosphates, preparation from alkynes and [hydroxy(dialkylphosphoryloxy)iodo]benzenes, 176
- Allochenodeoxycholic and allocholic acids, synthesis using $\text{PhIO}_2/\text{Py}_2\text{Se}_2$, 286
- Allyl azides, preparation by azidation of allyltrimethylsilanes, 222
- Allylic amination, 231
- Allylic oxidation, of alkenes, with (diacetoxyiodo)benzene and *tert*-butyl hydroperoxide, 182
- Amberlite resin, 393, 397, 398
- (+)-Ambruticin S, synthesis, 298
- Amidation
of allylic silanes, 256
copper-catalyzed, 255
enantioselective, 256
of hydrocarbons, 256
Rh(II)-catalyzed, 256
of saturated C–H bonds, transition metal catalyzed, 255, 256
of silyl enol ethers, 256
of steroidal derivatives, catalyzed by metalloporphyrins, 255
transition metal catalyzed, 253, 255–260
- Amides, azidation, 226, 227
- Amidobenziodoxoles, 56, 231
- Amidoiodanes
derivatives of cyclic imides, 109
as intermediates in Hofmann rearrangement, 109
stable bis(sulfonylimide) derivatives, 109, 110

- α -Amination, of aldehydes, using I_2 as a catalyst, 375, 376
- Amination and hydrazination, of non-functionalized arenes, 347
- Aminations, using hypervalent iodine reagents, 230–232
- Amines, oxidation to nitriles, 216, 217
- Aminobromination
 - by (diacetoxyiodo)benzene and bromamine-T, 158, 159
 - of electron-deficient olefins, 345
 - under mechanical milling conditions, 420
- Amphidinol 3, synthesis, 298
- Angucytline antibiotics, synthesis, 298
- Anilides
 - acetoxylation, 182
 - etherification, 182
 - tosyloxylation, 182
 - triflation, 183
- Anilines
 - ipso*-fluorination, 195, 196
 - oxidation to azobenzenes, 357, 358
 - oxidative dearomatization, 195, 196
 - in the presence of methanol, 196
- Aporphines, synthesis, 199
- (+)-Aquaticol, synthesis, 293
- Arenes, polycyclic, oxidative functionalization by [hydroxy(organosulfonyloxy)iodo]benzenes, 183
- Aromatic compounds, oxidative functionalization, 182–183
- Aroyl azides, preparation by azidation of aryl aldehydes, 228
- 5-Aroyl-pyrrolidinones, synthesis, 203
- Arsonium–iodonium ylides, reactions, 282
- Arylation, by diaryliodonium salts, 260–264
 - of aldehydes, catalytic enantioselective α -arylation, 266
 - asymmetric α -arylation of prochiral ketones, 262
 - of carbon nucleophiles, 262–264
 - of carbon surfaces, 264
 - of fluoride anion, 260, 431–440
 - of indoles and pyrroles, 263
 - of malonates, 260, 261
 - of phenols, 260–262
 - of phosphines, 262
 - of silyl enol ethers, 260, 261
 - of sulfides, 262
 - of thiosulfonate anion, 260, 261
 - transition metal-catalyzed, 265
- 2-Arylbenzimidazoles, synthesis, 206, 420
- Arylbenziodoxathioles, preparation and X-ray, 68, 69
- Arylbenziodoxoles, 59, 60
- 1-Arylcarbazoles, synthesis, 204
- Aryl(cyano)iodonium fluorides, preparation and X-ray structure, 96
- Aryl(cyano)iodonium triflates, preparation and properties, 94, 95
- Aryl fluorides, synthesis by thermal decomposition of diaryliodonium tetrafluoroborates, 433
- Aryl glycines, synthesis, 244
- Aryl(heteroaryl) iodonium salts, preparation by iodonium exchange reaction using aryl(cyano)iodonium triflates, 80
- Aryl iodides
 - chiral, as catalysts, 341
 - flexible C_2 -symmetric, 353
 - iodooxazoline-based, 342
 - spirobiindane-based, 341, 353
- Aryliodine(III) bis(pyridinium) salts
 - preparation and X-ray structure, 109, 110
 - oxidative properties, 111
- Aryliodine(III) carboxylates, 4, 6. *See also* [bis(acyloxy)iodo]arenes
- Aryliodine(III) diacetate, chiral spirobiindane, for enantioselective spirocyclization, 193, 194
- Aryliodine(V) fluorides, preparation, properties and X-ray structure, 126, 127
- Aryliodine(III) organosulfonates, 4, 6
- Aryliodonium imides
 - ortho*-substituted, 111, 112
 - preparation, 111
- Aryliodonium salts, 76–84
 - structure in solution, 84
 - X-ray studies, 82
- Aryliodonium ylides
 - antibacterial activity, 439
 - history, 99
- 1-Aryl-4-methyl-1,2,4-triazolo[4,3-*a*]quinoxalines, synthesis, 204
- 2-Aryl-*N*-methoxyethanesulfonamides, hypervalent iodine-catalyzed cyclization, 348
- Aryl(*N*-tosylimino)iodanes, X-ray structure, 113
- 2-Arylproline derivatives, synthesis, 205
- 1-Arylpyrrolopyrazinones, synthesis, 203
- Arylselenations, 235, 236
- [(Arylsulfonyl)methyl]iodine(III) bis(trifluoroacetates), preparation, 38
- (Arylsulfonylmethyl)iodonium salts

- Bis(azido)iodate, polymer-supported, preparation and reactions, 388
- (+)-Biscarvacrol, asymmetric total synthesis, 194
- 4,4'-Bis(dichloroiodo)biphenyl
preparation, 28
as recyclable chlorinating reagent, 153, 393
- Bis-iodonium salt
bicyclic, 74, 75
PQQ inhibitors, 443
- Bis(methoxycarbonyl)(phenyliodonio)methanide,
synthetic applications
C–H insertion reactions, 278
cyclopropanation of alkenes, 278
enantioselective cyclopropanations, 278
ortho-methoxy substituted, 278
- Bis(methoxycarbonyl)(phenyliodonium)methanide,
preparation, 99, 100
- Bis(organosulfonyl)(phenyliodonium)methanides,
PhIC(SO₂R)₂, preparation, 99
- Bis(perfluoroalkanesulfonyl)(phenyliodonium)methanides,
preparation, 100
- Bis(phenyl)iodonium chloride (BPI)
as inhibitor of cytochrome P450 reductase, 442
physiological effects, 442
- Bis(*p*-tolyl)iodonium chloride, Tol₂ICl, as food additive
in growing cattle, 442
- [Bis(trifluoroacetoxy)iodo]arenes
as catalysts for oxidative spirocyclization, 350
preparation, by oxidation of ArI, 37, 38
- [Bis(trifluoroacetoxy)iodo]benzene
abbreviations, 35
common names and abbreviations, 4, 5
oxidation of phenols, 184–192
polymer-supported, preparation, 383
preparation, from (diacetoxyiodo)benzene and
trifluoroacetic acid, 40
reaction with alkenes, 178
reactions in water, 416, 417
reagent for Hofmann rearrangement, 213, 215
reagent for intramolecular amidation, 203
reagent for oxidation of phenol ethers, 198, 199
X-ray, 41
- 3-[Bis(trifluoroacetoxy)iodo]benzoic acid
preparation, 40
as recyclable reagent, 398

Iodobenzene

- as excellent leaving group, 14
- magnetic nanoparticle-supported, 402
- polystyrene-supported, as catalyst, 406

Iodobenzenes, *ortho*-substituted, as organocatalysts, 342, 343

2-Iodobenzenesulfonamide, oxidation to

- 1-acetoxy-1,2-dihydro-1,3,2-benziodathiazole 3,3-dioxide, 69

2-Iodobenzenesulfonates, as pre-catalysts for oxidation of alcohols, 361, 362

Iodocarboxylation of alkenes, 162

2-Iodoisophthalic acid, as precursor to recyclable reagent, 396, 397

Iodolactonization

- hypervalent iodine-catalyzed, 344
- of pentenoic acids, 205

Iodonium imides, 4, 6. *See also* imidoiodanes

Iodonium ion, IUPAC rules, 4

Iodonium phenolates

- preparation from phenols and (diacetoxyiodo)benzene, 101
- properties, 101
- rearrangement by 1,4 aryl migration, 101

Iodolium salt, 74, 75

Iodonium salts

- biological activity, 439–443
- cyclic, 74–76
- definition and classification, 76
- history, 76
- key structural features, 8
- ligand coupling mechanism, 14
- mechanism of photolysis, 427
- reactions, 260–277
- structure, 3
- toxicity towards mammals, 439
- toxicity, 428
- X-ray structural data, 76

Iodonium 8-*I*-2 species, in gas phase, 13

- Iodonium transfer reaction, 81
- Iodonium ylides, 4, 6, 99–106
 - as carbene precursors, 278–282
 - cyclic, 101
 - 1,3-dicarbonyl derivatives, 99, 100
 - intramolecular phenyl migration, DFT study, 12
 - monocarbonyl, 105
 - preparation, 99–105
 - properties, 99
 - reactions, 278–282
 - reactions, catalyzed by rhodium(II) or copper complexes, 280, 281
 - transylation reactions, 103
 - X-ray structural studies 105, 106
- Iodoperfluoroalkanes, fluorous, 402
- 4-Iodophenoxyacetic acid, as catalyst, for oxidation of phenols, 349
- Iodophosphoryloxylation of alkynes and alkenes, 162
- 2-Iodopyridines, preparation and properties, 405 X-ray structure, 405 as recyclable reagents, 405
- 2-Iodosobenzoic acid (IBA), 5. *See also*
 - 1-hydroxy-1,2-benziodoxole-3(1*H*)-one
- Iodosylalkanes, as reactive intermediates, 248, 249
- Iodosylarenes
 - NMR and LC-MS study
 - ortho* substituted, solubility, 35
 - ortho* substituted, X-ray crystal structures, 35
 - preparation, by hydrolysis of acetates or chlorides, 32, 33
 - preparation, by oxidation of iodoarenes, 31, 32
 - as source of oxygen in transition metal-catalyzed oxidations, 251
 - structural studies, 33, 34
- Iodosylbenzene
 - aqua complexes, 13
 - discovery, 2
 - disproportionation, 33
 - explosion, 33
 - in metalloporphyrin-catalyzed oxidations, 250, 251
 - monomer complexes with 18C6 crown ether, 35
 - oligomeric, 33
 - polymeric structure, 33, 34
 - polymer-supported, preparation, 386 reactions, 386
 - preparation, by hydrolysis of $\text{PhI}(\text{OAc})_2$, 32
 - properties, 33
 - reactions in water, 413–416
- Iodosylbenzene, activated, cleavage of alkenes, 416, 417
- Iodosylbenzene, activation by bromide anion, 413, 414
- Iodosylbenzene sulfate, polymer-supported, preparation and reactions, 386
- Iodosylbenzene sulfates, 49
- 2-Iodosylbenzoic acid, *see*
 - 1-hydroxy-1,2-benziodoxole-3(1*H*)-one
- 3-Iodosylbenzoic acid
 - as oxidant, 284
 - preparation, 32
 - as recyclable reagent, 397–399
- Iodosyl compounds
 - polymeric structure, 31
 - preparation, 31
 - properties, 31
- Iodosyl elimination, in iodosylalkanes, 248, 249
- Iodosyl fluorosulfate, OIOSO_2F , preparation and properties, 23
- Iodosylperfluoroalkanes, preparation, by hydrolysis of $\text{C}_n\text{F}_{2n+1}\text{I}(\text{CO}_2\text{CF}_3)_2$, 32
- 2-Iodosylphenylacetic acid, cyclic tautomer, 72
- 2-Iodosylphenylphosphoric acid, cyclic tautomer, 72, 73
- Iodosyl selenate, $(\text{IO})_2\text{SeO}_4$, 23
- Iodosyl sulfate, $(\text{IO})_2\text{SO}_4$, preparation and structure, 23
- Iodosyl triflate, OIOTf , preparation and properties, 23
- Iodotosyloxylation of alkynes, 161
- Iodoxolones
 - preparation, by addition of ICl_3 to acetylenedicarboxylic acid, 70, 71
 - preparation, by oxidative cyclization of iodofumaric acid, 70, 71
 - X-ray structures, 70
- Iodoxybenzene, *see* iodylbenzene
- 2-Iodoxybenzenesulfonic acid. *See also*
 - 2-iodylbenzenesulfonic acid
 - amides, preparation and X-ray structure, 118
 - preparation and oxidizing properties, 124
- 2-Iodoxybenzoate, isopropyl
 - in the metalloporphyrin-catalyzed oxidations, 288
 - as reagent, 288
- 2-Iodoxybenzoate, methyl ester, 117
- 2-Iodoxybenzoic acid (IBX)
 - amides (IBX-amides), preparation and X-ray structure, 117
 - analogues of IBX, 122, 123
 - applications in organic synthesis, 288–296
 - as catalyst for oxidation of alcohols, 359, 360
 - dearomatization of phenols, 292
 - esters (IBX-esters), preparation and X-ray structure, 117
 - explosive properties, 121, 122
 - fluorous IBX, 122
 - generation of N-centered radicals, 294
 - history, 2, 121
 - mechanism of alcohol oxidation, theoretical study, 12
 - non-explosive formulation (SIBX), 122

2-Iodoxybenzoic acid (IBX) (*Continued*)

- o*-methyl-substituted IBX (Me-IBX), 122
- oxidation of alcohols, 288–291
- oxidation of the benzylic carbon, 293, 294
- oxidation of 1,2-diols, 291
- oxidation of secondary amines to imines, 294
- oxidations in ionic liquids, 419
- oxidations in non-DMSO solvents, 291, 292
- oxidative cyclization of anilides, 293, 294
- α -oxygenation of carbonyl compounds, 296
- pK_a value, 122
- polymer-supported, preparation and reactions, 390
- preparation, 282, 283
- preparation by bromate oxidation, 121
- preparation using Oxone, 121
- properties, 283
- pyridinium salt, 123
- six-membered cyclic IBX analogues, 124
- soluble analogs (mIBX), 122
- structure, 283
- synthesis of amino sugars, 293
- synthesis of heterocycles, 294, 295
- synthesis of α,β -unsaturated carbonyl systems, 293
- tetrafluoro-IBX derivative (FIBX), 122
- water-soluble analogs, 417, 418
- X-ray structure, 121, 122

Iodylalkanes, matrix isolation and FTIR spectra, 120

2-Iodylaniline, tosyl derivative, preparation and X-ray structure, 119

Iodylarenes, 115–120

- five-membered heterocyclic benziodoxole derivatives, 4, 6
- noncyclic, 4, 6, 115, 116, 283–287
- ortho*-phosphoryl substituted, X-ray structure, 116
- preparation and properties, 116
- pseudocyclic, 4, 6, 116–120, 287, 288

Iodylbenzene

- asymmetric oxidation of sulfides, 286, 287
- cooxidant with 2-pyridineseleninic anhydride, 284
- explosive properties, 116
- history, 116
- oxidation of alcohols, 283
- oxidation of naphthols, 284
- preparation and properties, 116
- in the presence of $VO(acac)_2$, 286
- X-ray structure, 116

4-Iodylbenzenesulfonate, potassium salt, preparation and properties, 405, 406

2-Iodylbenzenesulfonic acid (IBS)

- as catalyst benzylic oxidation, 363
 - as catalyst for oxidation of alcohols, 361
 - cyclic or pseudocyclic derivatives, 4, 6
- Iodyl fluorosulfate, 115
- 2-Iodylphenol ethers
- preparation and X-ray structure, 120
 - polymer-supported, 391
- 2-Iodylphenol, tosyl derivative, preparation, 119
- 2-(*o*-Iodylphenyl)-oxazolines, chiral, preparation and properties, 120, 288

Iodyl sulfate, 115

Iodyl triflate, 115

Iodyltrifluoromethane, preparation, 120

Ion-exchange, recycling methodology, 397

Ionic liquid, [emim]⁺[BF₄][−], 400

Ionic liquids, as recyclable solvents, 418, 419

Ionic-liquid-supported iodoarenes, as catalysts, 406

Ionic-liquid-supported reagents, 400, 401

Ishihara's cycloetherification, enantioselective, 370, 371

Isoflavone derivatives, synthesis from

o-hydroxychalcones, 211

Isoindolinone derivatives, synthesis, 203

Isoxazoles

- phenanthro-fused, by oxidative coupling, 199
- synthesis, 205

Isoxazoline N-oxides, synthesis by oxidation of β -hydroxyketoximes, 217, 218

Isoxazolines, synthesis from aldoximes and olefins, 217

(−)-Jesterone, enantioselective synthesis, 184

Ketones, macrocyclic, synthesis by alkoxy radical fragmentation, 240, 241

Ketoximes, deoximation to ketones by HTIB, 212

Kita's catalytic spirocyclization, 350

Koser's reagent, 4, 5, 169. *See also*

[hydroxy(tosyloxy)iodo]benzene (HTIB)

Kryptofix (K2.2.2), 433, 434

β -Lactam antibiotics, synthesis, 298

Lactams, synthesis, 204

Lactols, synthesis by oxidative rearrangement reaction of 2,3-epoxy alcohols, 208

Lactones, synthesis, by radical cyclization of carboxylic acids, 239

by alkoxy radical fragmentation, 240

Lactonization, of 4-phenyl-4-pentenoic acid, 205

Lagunamycin, synthesis, 291

Lambda nomenclature, 3, 4

L-6-[¹⁸F]fluoroDOPA, 435

- Ligand coupling, on the iodine atom, 13, 14
- Ligand exchange
dissociative and associative mechanism, 13, 14
on the iodine atom, 13, 14
- Lycorane Amaryllidaceae alkaloids, enantioselective synthesis of the core, 225
- Macrocyclic iodonium salts, 76
- Magnetite nanoparticles, 402
- (±)-Magnofargesin, synthesis via alkynyliodonium salt, 272
- (±)-Makaluvamine F, synthesis, 227
- (±)-Maoecrystal V, synthesis, 298
- (+)-Maritidine, synthesis by phenolic spirocyclization, 189
- m*-chloroperoxybenzoic acid (*m*CPBA), as terminal oxidant in catalytic reactions, 337–356, 366, 369–371, 373, 374
- [Menthloxy(tosyloxy)iodo]benzenes, chiral, as reagents for enantioselective oxidation of sulfides, 220, 221
- Metalloporphyrin-mediated oxygenations, in the presence of iodobenzene, 366, 367
- Metalloporphyrins
adducts with iodosylbenzene, 252
as catalysts in oxidations with iodosylbenzene, 251
- (–)-Metazocine, asymmetric synthesis, 256
- 5-Methoxy[2.2]paracyclophan-4-yl iodonium salts, 439
- 2-Methoxyphenyliodonium
bis(methoxycarbonyl)methanide, X-ray structure, 106
- [Methoxy(tosyloxy)iodo]benzene, PhI(OMe)OTs
preparation, 45
reagent for oxidative rearrangements, 212
- 2-Methylphenyl(2-methoxyphenyl)iodonium chloride, conformational structure, 439
- mGluR5 ligands, fluorine-18 labeled, 438
- m*-iodosylbenzoic acid, as source of oxygen in transition metal-catalyzed oxidations, 251, 252
- Moenomycin A, synthesis, 291
- Monocarbonyl iodonium ylides, generation *in situ* and reactions, 281
- Monoperoxsulfate, tetraphenylphosphonium, as terminal oxidant, 359, 360
- Morphinandienone alkaloids, synthesis, 200
- N*-acylnitrenium intermediates, generation from amide and hypervalent iodine, 203
- N*-alkylsaccharins, preparation by *N*-radical cyclization, 247
- n*-butylpyridinium tetrafluoroborate, [BPy]BF₄, as a recyclable solvent, 419
- N*-hydroxysuccinimide esters, preparation from alcohols, 292
- N*-(2-iodylphenyl)acylamides (NIPA)
polymer-supported, 390, 391
preparation and X-ray structure, 118, 119
- (±)-Nitidanin, synthesis, 291
- Nitriles, from aldehydes and (diacetoxyiodo)benzene, in aqueous ammonia, 417
- 2-Nitrobenzo[*b*]furans, synthesis, 205
- Nitrogen heterocycles, preparation by *N*-radical cyclization, 247
- N,N*-dimethylarylamines, azidation to *N*-azidomethyl derivatives, 226
- N,N*-dimethylhydrazides, cleavage to carboxylic acids, 212
- Norsesquiterpene, spirolactone/testosterone hybrid, synthesis, 209
- N*-tosyliminoiodanes, ArINTs
as nitrene precursors in transition metal catalyzed reactions, 253
as reagents in transition metal catalyzed amidation, 255
- N*-tosyliminophenyl iodane, PhINTs, preparation, 111
- Oligomeric iodosylbenzene perchlorate, X-ray crystal structure, 34
- Oligomeric iodosylbenzene sulfate, (PhIO)₃SO₃
ESI-MS
reactions in water, 416
as reagent for oxidation of sulfides, 218
as terminal oxidant in transition metal-catalyzed oxidations, 252
X-ray crystal structures, 34
- Organoiodine(III) chlorides
preparation by chlorination of organic iodides, 27
structural studies, 30, 31
- Organoiodine(III) compounds, classification by type of ligands, 4, 6
- Organoiodine(V) compounds, common classes, 4, 6
- Organoiodine(V) compounds, as protein tyrosine phosphatase (PTP) inhibitors, 439
- Organoiodine(III) derivatives of phosphoric acid, 49
- Organoiodine(III) difluorides, 23–27
structural studies, 26, 27
- Organoiodine(V) fluorides, 126, 127
- Organoiodine(III) nitrate, PhI(ONO₂)₂, 48
- Organoiodine(III) perchlorate, PhI(OCIO₃)₂, 48, 49
- Organoiodine(III) triflate, PhI(OTf)₂, 48
- 1-Organosulfonyloxy-1,2-benziodoxole-3(1*H*)-ones, preparation, 54
- Ortho-effect, in reactions of diaryliodonium salts with nucleophiles, 265

- Ortho*-phenylation, of phenols, 262, 263
 1,3,4-Oxadiazoles, 2,5-disubstituted, synthesis, 206
 1,2,4-Oxadiazoles, synthesis, 204
 Oxazole derivatives, synthesis, 372, 375
 Oxazolines, 2-substituted, synthesis, 206
 Oxidation of alcohols
 by 1-chloro-1,2-benziodoxol-3(1*H*)-one/TEMPO, 167
 1,2-diols, 167
 with DMP, 296–299
 epimerization-free, 298
 (fluoroalkyl)alkanols, to aldehydes, 166
 by HTIB under solvent-free microwave irradiation, 167
 with IBX, 288–291
 by iodine(III) reagents, 164–168
 by iodosylbenzene/KBr, 164, 165
 with Oxone, catalyzed by PhI and RuCl₃, 367, 368
 by PhICl₂/TEMPO, 167
 by PhI(OAc)₂/I₂, 165
 by PhI(OAc)₂/NaBr, 165
 by PhI(OAc)₂/TEMPO, 165–167
 with potassium peroxodisulfate, catalyzed by PhI and TEMPO, 366
 in the presence of Wittig ylide, 166, 291, 298
 transition metal catalyzed, 167
 Oxidation of alkylbenzenes, with Oxone, catalyzed by PhI and RuCl₃, 367, 368
 Oxidation of anilines, hypervalent iodine-catalyzed, 357
 Oxidation of iodoarene, to aryl iodine(III) *in situ*, 337, 338
 Oxidations
 of antimony, 222
 of bismuth, 222
 of C–H bonds, at the benzylic or allylic position, 181, 182
 of nitrogen, 216–218
 with PhIO/Bu₄NI in water, 415, 416
 of sulfur, 218
 transition metal catalyzed, 250
 using catalytic Bu₄NI and TBHP as oxidant, 369
 Oxidative amination, of arenes, hypervalent iodine-catalyzed, 347, 349
 Oxidative bromination, of arenes, hypervalent iodine-catalyzed, 346
 Oxidative brominations, using iodine(III) reagent and bromide, 158, 159
 Oxidative cleavage, of alkenes and alkynes, hypervalent iodine-catalyzed, 345
 Oxidative coupling
 of aromatic substrates, 196–201
 of Bodipy monomers, 201, 203
 of cycloalkenylsilanes with silylated nucleobase, 200, 203
 in intramolecular mode, 197–201
 of ketones with carboxylic acids, 369
 of Michael adducts, by PhIO/Bu₄NI in water, 415
 mechanism 196, 197
 of non-phenolic aromatic substrates, 200, 202
 Oxidative cyclizations, 201
 Oxidative cycloetherification, of oxo-substituted phenols
 with Bu₄NI/H₂O₂, 370
 enantioselective, 370
 Oxidative dearomatization
 of anilines, 195, 196
 catalytic, 350
 formation of cyclohexadienones, 195, 196
 in the intramolecular mode, 187
 mechanism, 196
 of phenols, 183–195
 in the presence of carbon nucleophiles, 187
 in the presence of fluoride anion, 187
 of 2-substituted phenols, 193–195
 using (diacetoxyiodo)benzene in methanol, 184, 185
 Oxidative decarboxylation, of 2-aryl-substituted carboxylic acids, 206
 Oxidative decarboxylation/iodination of carboxylic acids, 162
 Oxidative fragmentations, 201, 206
 Oxidative functionalization, hypervalent iodine-catalyzed, 342–346
 Oxidative iodination
 of alkanes, with the PhI(OAc)₂–iodine system, 160
 of aromatic and heteroaromatic compounds, 160, 161
 of electron-deficient heterocyclic systems, 160
 of ketones, 162
 of terminal alkynes, 163
 using tosyloxybenziodoxole-iodine system, 161
 Oxidative phenolic cyclizations, in the synthesis of
 acetylaspidoalbidine, 192
 (–)-cylindricine C and (–)-2-epicylindricine C, 192
 dihydrofuranobenzofurans, 192
 discorhabdin A, 192
 galanthamine, 192
 platensimycin, 192
 (+)-plicamine, 192
 tuberostemonine and didehydrotuberostemonine, 192
 Oxidative rearrangements, 201, 206
 Oxidative spirocyclization
 of amides and ketoximes, 187
 of catechol, 187
 enantioselective, 353
 in enantiospecific synthesis of (+)-puupehenone, 187
 hypervalent iodine-catalyzed, 350–354
 of N-protected tyrosine, 187

- of phenolic substrates, 187
- in synthesis of annosqualine, 190
- in synthesis of cortistatin class of natural products, 188
- in synthesis of furoquinolinone and angelicin derivatives, 188
- in synthesis of nitrogen heterocycles, 188
- in synthesis of (\pm)-stepharine, 190
- 10-Oxidophenothiiodonium salt, 74, 75
- Oximes, oxidation to nitroso compounds, 218
- β -Oxoalkyl(phenyl)iodonium salts, generation from silyl enol ethers, 96, 97, 275
- μ -Oxo-bridged iodanes
 - mesylate, 47
 - nitrate, 49
 - perchlorate, 48
 - tetrafluoroborate, 48
 - triflate, 48
 - trifluoroacetate, 49, 192, 417
- (9-Oxo-9*H*-fluoren-2-yl)phenyliodonium
 - hexafluoroantimonate, as photoinitiator, 42
- Oxoindoles, 3,3-disubstituted, synthesis, 343
- (\pm)-Oxomaritidine, synthesis, 385
- Oxone (2KHSO₅·KHSO₄·K₂SO₄), in oxidation of iodobenzene, 32
- Oxone, as terminal oxidant in catalytic reactions, 337, 340–343, 349–351, 355–368
- α -Oxyacylation, Bu₄NI-catalyzed, 369
- Oxygen heterocycles, synthesis by oxidative cyclizations, 205
- Oxylactonization, enantioselective
 - with Bu₄NI as pre-catalyst and H₂O₂ as oxidant, 369
 - of ketocarboxylic acids, hypervalent iodine-catalyzed, 339
 - of *ortho*-alkenylbenzoates, 179
- Pachastrissamine, synthesis, 291
- p*-Alkoxyphenols, oxidative dearomatization, by (diacetoxyiodo)benzene, 184, 185
- Palladacycles, reactions with aryliodonium imides, 257
- (+)-Pancratistatin, total synthesis, 225
- Passerini reaction, 295
- Pd-catalyzed oxidations, with hypervalent iodine reagents, 252
- (+)-Peloruside A, synthesis, 298
- Pentafluoroethylbenziodoxolone, 61
- Pentafluorophenyliododifluoride, C₆F₅IF₂, X-ray and spectroscopy studies, 27
- Pentavalent iodine, structural types, 3, 4
- Perfluoroalkyliodine(V) fluorides, preparation and X-ray structure, 126
- Perfluoroalkyl(phenyl)iodonium triflates (FITS reagents)
 - as electrophilic perfluoroalkylating reagents, 275, 276
 - preparation, 97
- Periodate oxidation, application in chemical and instrumental analysis, 426
- Periodates, 128
- Periodate salts, as oxidizers in pyrotechnic formulations, 426
- Periodic acid
 - glycol-cleavage, 303, 304
 - as oxidant, 426
 - oxidative cleavage of protecting groups, 305
 - oxidative iodination of aromatic compounds, 305
 - properties and structure, 128
 - as reagent, 303–305
 - synthesis of nitriles from alcohols or aldehydes, 305
 - transition metal catalyzed oxidations, 304, 305
- Periodinanes, general name, 3
- 4,5-Phenanthryleneiodonium salts, 74, 75
- Phenol ethers
 - intramolecular cyclization of azido derivatives 199, 200
 - nucleophilic substitution using hypervalent iodine, 197
 - oxidative coupling, hypervalent iodine-catalyzed, 354
- Phenols
 - oxidation to benzoquinones, hypervalent iodine-catalyzed, 349
 - oxidation to *o*-quinones, by IBX, 292
 - oxidation to *o*-quinones, iodine(V) catalyzed, 364
 - p*-substituted, oxidation to *p*-quinols, 350
- Phenoxiodonium salt, 74, 75
- Phenylbenziodazole, preparation and X-ray structure, 63
- 1-Phenyl-1,2-benziodoxole-3(1*H*)-one, preparation, 59–60
- Phenyl(cyano)iodonium triflate, preparation and application as the iodonium transfer reagent, 95
- Phenyl(3-formylphenyl)iodonium salts, synthesis and ¹⁸F-fluoridation, 438, 439
- Phenylhydrazones, regeneration of carbonyl, 218
- Phenyliodonium imide
 - ortho*-methoxy substituted, X-ray structure, 113
 - ortho*-sulfonyl substituted, X-ray structure, 113
 - polymeric structure, 113, 114
- Phenyliodonium, leaving group ability, 267
- Phenyliodonium ylides, X-ray structures
- Phenyl[2-(trimethylsilyl)phenyl]iodonium triflate, as benzyne precursor, 266
- Phosphonium–iodonium ylides
 - preparation and X-ray structure, 104
 - reactions, 282

- Phosphoranyl-derived benziodoxoles, preparation and X-ray structure, 60
- Phosphoryloxylactonization, hypervalent iodine-catalyzed, 344
- α -Phosphoryloxylactonization of ketones, iodobenzene-catalyzed, 342
- Photoacid generators (PAGs), 427
- Photoinitiators, for cationic photopolymerizations, 426
- Photopolymerization, 427
- Photoresist technology, 426
- Photosensitivity, of iodonium salt, 427
- Physostigmine, synthesis, 344
- (-)-Pinidine, asymmetric synthesis, 207
- (\pm)-Platensimycin, synthesis, 298
- (-)-Platensimycin, synthesis by oxidative Prins–pinacol tandem process, 191
- p*-nitro(dichloroiodo)benzene, chlorination of pyrrolidine, 156, 157
- Poly[(diacetoxyiodo)styrene]
 applications, 383–386
 oxidation of alcohols, 384
 oxidation of glycols, 384
 oxidation of phenols, 384, 385
 oxidation of sulfides, 384
 oxidative iodination, 384
 preparation, 382, 383
 synthesis of heterocycles, 385
 synthesis of organyltellurophosphates, 386
- Poly[(dichloroiodo)styrene]
 as chlorinating reagent, 381, 382
 preparation, 381
- Poly(ethylene glycol-400), PEG-400, as a recyclable solvent, 419
- Poly[hydroxy(tosyloxy)iodo]styrene, synthetic applications, 387
- Polymerization, dual photo- and thermal-initiation systems, 427, 428
- Polymer-supported reagents, general application, 381
- Polystyrene, azidation and click-type functionalization, 228, 431
- Polyvalent iodine, *see* hypervalent iodine
- Polyvalent iodine compounds, *see also* hypervalent iodine compounds
 classification, 3, 4
 commercial availability, 425
 common abbreviations, 4, 5
 common names, 4, 5
 IUPAC nomenclature, 3, 4
 practical applications, 425
- Positron emission tomography (PET), 431, 432
- Potassium iodate
 as dietary supplement and a food additive, 425
 as source of iodine in iodized salt, 425
 toxicity, 425, 426
- Prins–pinacol, oxidative tandem process, 190, 191
- Pseudocyclic iodylarenes, polymer-supported, 390, 391
- (-)-Pseudolaric acid B, synthesis, 298
- Pseudopterosin and elisabethin, analogs, synthesis, 301
- Pseudorotation on the iodine atom, 9, 10, 14
- (\pm)-Pterocarpans, synthesis, 291
- Pyridine derivatives, synthesis, 375
- 2-Pyridyldiselenide, as reagent, 285
- Pyrimidines, phenanthro-fused, by oxidative coupling, 199
- Pyrroles, polysubstituted, synthesis, 206
- Pyrrolidines, 2-substituted, synthesis, 239
- Pyrrolidino[60]fullerene, synthesis, 204
- Pyrrolidinone derivatives, synthesis, 203
- Pyrrolin-4-ones, synthesis, 204
- Pyrrolo(benzo)diazepines, synthesis, 204
- Pyrrolo[2,1-*c*][1,4]diazepines, synthesis, 203
- Pyrroloiminoquinone system, by intramolecular coupling of azido derivatives, 199
- Quaternary ammonium iodide catalyst, chiral, 370
- Quaternary carbon center, by oxidative *ipso*-rearrangement, 191, 192
- Quinazolines, synthesis, 375
- Quinolinone derivatives, synthesis, 203
- Radical alkylation
 of alkenes, 237, 238
 of nitrogen heterocycles, 237, 238
- Radical cyclizations, 236, 239, 247
- Radical fragmentation–phosphorylation, 246
- Radical fragmentations, 236–248
- Radical reactions of λ^3 -iodanes, 14, 15
- Radical rearrangements, 236, 239–248
- Radicals
 generation from amides and iodosylbenzene, 247, 248
 nitrogen-centered, generation, 247, 248
 oxygen-centered, generation, 238–244
- Radiofluorination, of diaryliodonium salts, 432
- Reactions in water, 413–418
- Recyclable nonpolymeric reagents, separation techniques, 391
- Recyclable organic solvents, 418–420
- Recyclable reagents
 biphenyl, 394–396
 derivatives of 1,3,5,7-tetraphenyladamantane, 394–396

- terphenyl, 394–396
- tetraphenylmethane, 394–396
- Reductive elimination of PhI, 13, 14
- Resolvin D1, synthesis, 299
- Resveratrol, diacyl derivatives, hydroxylation, 296
- Ring expansion
 - in reactions of HTIB, with alkenes, 212
 - reactions, promoted by hypervalent iodine, 207
 - in reactions of 1-vinylcycloalkanol derivatives, 212
- Ripostatin B, synthesis, 299
- (+)-Ritterazine K, synthesis, 298
- Salvinorin A, synthesis, 298
- Sceletone, total synthesis, 191
- Secondary bonding in hypervalent iodine compounds, 9, 11
- Secondary bonds, in [bis(acyloxy)iodo]arenes, 43
- Seco*-psymberin/irciniastatin A, synthesis, 206
- Selenodecarboxylation, 236
- Self-assembly of hypervalent iodine compounds, 9, 11
- SET mechanism, in reactions of λ^3 -iodanes, 15
- SET mechanism, in reactions of λ^5 -iodanes, 15
- (+)-Sieboldine A, synthesis, 299
- Silica-supported iodoarenes, as catalysts, 406
- Silylalkenes, reaction with PhIO•BF₃, 175
- Silyl enol ethers, oxidative functionalization
 - preparation of 1,4-butanediones, 172
 - preparation of β -keto phosphonates, 172
 - preparation of α -methoxylated esters and lactones, 173
 - preparation of oxygen heterocycles, 172
 - preparation of α -substituted ketones, 171, 172
 - preparation of α -trifluoromethanesulfonyloxyketones, 172
 - α -tosylation, 231, 232
- Single-electron transfer (SET) mechanism, 15
- SiO₂-supported RuCl₃, as recyclable catalyst, 393
- (*S*)-Ketoprofen, synthesis, 266
- Sodium metaperiodate, NaIO₄
 - for azidoiodination of alkenes, 306
 - for carbonylation of benzylamines, 306
 - for diazidation of alkenes, 306
 - for glycol-cleavage, 305
 - for oxidation of alcohols to carbonyl compounds, 305
 - as reagent, 305–307
 - for transition metal catalyzed oxidations, 306, 307
- Solvent-free reactions, 420–422
- Somamide A, synthesis, 291
- Spiculoic acid A, synthesis, 291
- Spirastrellolide A, synthesis, 299
- Spirocyclization, of 2-substituted phenols,
 - enantioselective, 193, 194
- Spirofurans and benzopyrans, iodobenzene-catalyzed
 - synthesis, 352
- Spiroketalization of phenolic alcohols, DFT calculations, 12
- Spirolactams, synthesis
 - by catalytic spirocyclization, 353
 - by oxidative spirocyclization, 188
- Spirolactones, preparation from phenolic substrates, 350
- Spirooxindoles, synthesis, 205, 355
- (–)-Spirotryprostatin B, synthesis, 298
- Steroidal derivatives, synthesis by alkoxy radical
 - fragmentation, 240, 241, 244
- Steroidal substrates, oxidative transformations, 209, 210
- (–)-Subincanadines A and B, synthesis, 291
- Sulfate esters, cyclic, preparation, 176, 177
- Sulfides
 - α -azidation, 227
 - enantioselective oxidation, 220
 - oxidation to sulfonyl chlorides, 219
 - oxidation to sulfoxides, 218
- Sulfonylation, allylic, of α -methyl styrenes, 373, 374
- Sulfonyloxylactonization, hypervalent iodine-catalyzed, 344
- Sulfoxides, chiral, by enantioselective oxidation of
 - sulfides, 220, 221
- Tagged hypervalent iodine reagents, 397
- Tandem catalytic systems, based on hypervalent iodine, 364–368
- TEMPO
 - ion-supported, 400
 - as radical scavenger, in reactions of diaryliodonium salts, 434, 435
- TEMPO-catalyzed oxidations, 166
- 4-*Tert*-butyl(difluoroiodo)benzene, fluorination of esters
 - of cephalosporin, 146, 148
- Tert*-butyl hydroperoxide (TBHP), as terminal oxidant, 369, 371–375
- 1-(*Tert*-butylperoxy)benziodoxoles, preparation 55 X-ray structure, 55
- 1-(*Tert*-butylsulfonyl)-2-iodylbenzene, preparation and X-ray structure, 116
- Tertiary allylic alcohols, rearrangement to enones,
 - iodine(V) catalyzed, 362
- Tetrachloriodate salts, as chlorinating reagents, 158
- (Tetrafluoroiodo)benzene, C₆H₅IF₄, preparation,
 - properties and X-ray structure, 126
- Tetrahydroisoquinolines
 - C–H functionalization, 377
 - synthesis by Ugi-type multicomponent reaction, 295

- Tetrahydropyrans, 2-(*N*-acylaminol) substituted, synthesis, 206
- (–)-Tetrodotoxin, synthesis using $\text{PhIO}_2/\text{Py}_2\text{Se}_2$, 285
- 1,2,4-Thiadiazoles, synthesis, 204
- Thiazoles
- 2,4-disubstituted, synthesis from alkynyliodonium salts 272
 - phenanthro-fused, by oxidative coupling, 199
- Thiazolo-fused quinolinones, synthesis, 203
- Thienyl iodonium salts, preparation by iodonium transfer using $\text{Ph}(\text{CN})\text{OTf}$, 81
- Thioacetals, cleavage to carbonyl compounds, 221
- Thiocyanation, of indoles, pyrrole and arylamines, 296
- Thiocyanations, 232–235
- Thioketals, cleavage to carbonyl compounds, 221
- Thiophene dimers, preparation, by oxidative coupling of 3-substituted thiophenes, 200, 202
- Thiosulfonic S-esters, preparation by oxidation of diaryl disulfides or thiophenols, 219, 220
- Three-center-four-electron ($3c - 4e$) bond, 1, 7
- Thyroxine, 2
- (–)-Tirandamycin C, synthesis, 299
- Tosyliminoiodane, PhINTs
- aziridination of alkenes, 253
 - reagent for Hofmann rearrangement, 215
- α -Tosyloxylation of ketones
- enantioselective, catalyzed by chiral iodoarenes, 341
 - iodobenzene-catalyzed, 339, 340
 - NH_4I -catalyzed, 370
 - p*-iodotoluene-catalyzed, 340
 - in the presence of a catalytic I_2 , 340
 - under solvent-free conditions, 420
- α -Tosyloxyketones
- from alcohols, by oxidation–tosyloxylation, 170
 - preparation from ketones and HTIB, 169, 170
- Trans* influence
- in hypervalent iodine(III) compounds, 7, 11
 - in hypervalent iodine(V) compounds, 11
 - quantitative measurement, 11
- Trans*-2-aminocyclohexanecarboxylic acid, synthesis, by Hofmann rearrangement, 215
- Triaryliodanes, 107
- Triaryl- λ^3 -iodanes, low-temperature NMR studies, 9, 10
- [1,2,4]Triazolo[4,3-*a*][1,4]benzodiazepine derivatives, synthesis, 206
- 1,2,4-Triazolo[4,3-*a*]pyrimidines, synthesis, 204
- Trifluoromethylation
- asymmetric, in the presence of imidazolidinone catalyst, 277
 - of C-nucleophiles, 277
 - of β -ketoesters, 276, 277
 - of N-nucleophiles, 277
 - of P-nucleophiles, 277
 - of S-nucleophiles, 277
- Trifluoromethylbenziodoxoles, 60–62
- from 2-iodobenzoic acid, 60
 - from methoxybenziodoxole or acetoxybenziodoxole, 60
 - as reagents for the trifluoromethylation, 61, 276, 277
 - X-ray structures, 60, 61
- (Trifluoromethyl)iodine dichloride, CF_3ICl_2
- CF_3ICl_2 , X-ray crystal structure, 31
 - preparation, 29
- Trifluoromethyliododifluoride, CF_3IF_2
- theoretical studies, 26
 - X-ray structure, 26, 27
- Triisopropylsilyl enol ethers, azidation to β -azido adducts, 224, 225
- 1-[(Triisopropylsilyl)ethynyl]-1,2-benziodoxol-3(1*H*)-one (TIPS-EBX), 59
- 1,3,5-Trioxocane derivatives, synthesis, 244
- Triphenyl iodine, Ph_3I , 107
- Tris(alkynyliodonium) salts, 92
- Trivalent iodine, structural types, 3, 4
- Twisted IBX, as catalyst for oxidation of alcohols, 361
- α,β -Unsaturated carbonyl compounds, synthesis by IBX oxidation, 293
- Valienamine, synthesis via iodosyl elimination, 249
- Vinyl iodonium ions, *ab initio* MO calculations of reactivity, 12
- Vinyl sulfones, chiral, synthesis by alkoxy radical fragmentation, 241
- Wightone, regioselective synthesis, 210, 211
- Ylides
- of 2,4-dihydroxyacetophenones, preparation, 103
 - of hydroxycoumarins, preparation and structure, 101
 - of hydroxyquinones, preparation, 102
 - aza analogues, 102
- Ynamides, by amination of terminal alkynes, 231
- Zwitterionic iodonium compounds, 101
